* When only one factor is tested, the model is equivalent with the model of the higher degree of freedom. For example, for $100 \times 100 \times 100$ ST-30, the degrees of freedom are 100, 100, 100, and 100, respectively. For the $100 \times 100 \times 100$ ST-30, the degrees of freedom are 100, 100, 100, and 100, respectively. The higher the degree of freedom, the higher the degree of independence in the higher degree of freedom.
